- **Twist-off Cap/ Lug Cap Line**
- **All Kinds of Leak Testers**
- **Vision Camera Inspection**

Meet China · Package the World

Hall 2 ▶ Stand 2A10

GREETINGS

Dear exhibitors, dear visitors,

A warm welcome to METPACK 2026. We are delighted that Messe Essen is once again hosting the world's leading trade fair for metal packaging – now for the 11th time. Every three years, the international industry gathers here in Essen to experience innovations and trends live and to exchange ideas face to face. METPACK makes current developments visible, sets new impulses for a globally active industry and plays an active role in shaping the future.

The metal packaging industry is on the move: machinery and processes are becoming ever more efficient, material savings and energy consumption are coming into even sharper focus, and artificial intelligence is opening up new possibilities in production and development. At the same time, issues such as production reliability, supply chains and green steel production are shaping the market. Especially in geopolitically challenging times, it is clear just how important innovative strength, reliability and international networking are.

Metal packaging has also continued to gain in importance: thanks to its high recyclability, it offers ideal conditions for a functioning circular economy. This not only gives it clear competitive advantages, but also strengthens its image compared with other packaging solutions.

The market surrounding the beverage can is developing with particular dynamism. New consumer trends such as energy drinks are adding momentum to the market. At the same time, requirements relating to formats, designs and decoration are increasing. Yet traditional metal food packaging is also proving its enduring strength – wherever shelf life, security of supply and resource efficiency matter.

METPACK not only reflects this momentum – it also puts it center stage. With the established METPACK Conference and the new “Talk in a Can” forum in Hall 2, featuring product presentations, discussions and expert lectures, the event offers a strong supporting program with a high degree of practical relevance. Another highlight is once again the METPACK Innovation Awards, which impressively underscore this industry's inventive spirit and drive for the future. We can look forward to seeing who will take home this year's coveted Bronze, Silver and Gold awards.

Particularly pleasing: METPACK has grown and this year occupies even more space than in 2023. The fact that all market leaders will be on site underlines the immense importance of this international B2B event in Essen.

We wish all exhibitors, visitors and partners a successful METPACK, inspiring conversations, new perspectives and strong business results.

Thomas Kufen
Chairman of the Supervisory Board of Messe Essen
and Lord Mayor of the City of Essen

Oliver P. Kuhr
CEO of Messe Essen

INTERNATIONAL CONFERENCE PROGRAM FOR THE METPACK CONFERENCE FINALIZED

When the international metal packaging industry gathers in Essen for METPACK from 5 to 8 May 2026, knowledge transfer will also take center stage on the second day of the trade fair: on Wednesday, 6 May 2026, the METPACK Conference 2026 will bring together experts from across the entire value chain. At Congress Center West, participants can expect a compact international lecture program covering current developments, innovative technologies and sustainable solutions relating to cans and closures.

As always, the METPACK Conference complements the exhibition at the world's leading trade fair for metal packaging with a strong platform for professional exchange. While live demonstrations, product presentations and personal discussions take center stage in the exhibition halls, the conference in the adjacent Congress Center West will become the industry's think tank. Eight international speakers will present in-depth technical talks on the current challenges and future issues facing the global metal packaging industry.

The METPACK Conference will open with **Clarissa Odewald**, Chairwoman of the Executive Board of **thyssenkrupp Rasselstein**. In her **keynote** on the structural transformation of the industry, she will outline how the metal packaging industry must evolve in the face of decarbonization, geopolitical uncertainty, volatile energy and raw-material markets, and growing regulatory requirements. The focus will be on the question of how competitiveness and climate targets can be achieved at the same time – and on the role the metal packaging industry plays in Europe's industrial base.

A key thematic block of the conference is dedicated to modern packaging steels, material efficiency and lightweighting. In their presentation **"Designing the Next Generation of Packaging Steel: the Maleis® Case for Easy Open Ends"**, **Laura Rigoni** and **Gilles Mangin** of **ArcelorMittal** will present new approaches to packaging steel for easy-open-end applications. The focus is on metallurgical principles and different hardening mechanisms that enable further weight reduction while preserving the ductility required for opening performance.

Anne Reichardt, Research Engineer at **thyssenkrupp Rasselstein**, and **Benjamin Liebscher**, FEA Specialist at **thyssenkrupp Rasselstein**, will follow later with the presentation **"Material matters: Let's redefine your standard!"**. They will show how additional downgauging potential in D&I food cans can be unlocked using finite element analysis. The aim is to achieve higher strength without impairing formability, thereby further advancing material savings, efficiency and sustainability.

Dr. Nick Silk, Head of Product Development at **Tata Steel UK**, will also address the future of packaging steel. His presentation, **"High recycled content packaging steels"**, explores how increasing recycled content and varying scrap qualities affect the chemistry and processing of packaging steels. It also addresses how packaging steels with significantly higher recycled content can be manufactured and what this means for producers and consumers.

A second thematic block focuses on new packaging and process solutions. In **"A sealable can & aseptic canning method"**, **Jiawen Chen**, Founder of **Guangzhou Jorson Food Technology**, will present a concept for the aseptic

filling of solid foods in heat-sealed shallow drawn containers. The method combines an easy-open can with an aseptic preservation process and is intended to enable shorter heating times together with quality advantages for the filled products.

Gus Reall, Executive Director of **CDL**, and **Dennis Stammen**, Vice President Metal Forming of **Stolle**, will present another innovative approach to greater sustainability in the beverage can sector. Their presentation, **"1-Alloy Cans & Ends for a Sustainable Canning Industry Future"**, introduces a concept under which beverage can bodies and ends could in future be manufactured from a single aluminium alloy. This would simplify the material cycle, reduce the need for new aluminium and further improve the environmental footprint of the beverage can.

Addressing alternative container concepts, **Florian Weil**, CEO of **Weil Technology GmbH**, will speak on **"Sustainable packaging solutions: Laser-welded stainless steel containers for demanding filling goods"**. He will present laser-welded stainless steel containers as a PFAS-free, durable and fully recyclable addition to conventional can production. The presentation will show how modern laser welding technology creates smooth, tight and hygienically suitable seams, opening up new perspectives especially for demanding, reactive or high-value filling goods.

Another key focus is on coatings, regulatory requirements and product integrity. In his presentation, **"Using Electrochemical Impedance Spectroscopy to Track Coating Degradation in Metal Cans"**, **Alain Cagnard** of **Eastman Chemical Company** will explain how coating degradation in metal cans can be detected and quantified at an early stage using electrochemical impedance spectroscopy (EIS). This includes chemical, thermal and mechanical stresses as well as the transition to chromium-free passivation alternatives (e.g. CFPA) and the requirements placed on suitable coating systems.

Building on this, **Marco Minghetti**, Closures Lab Manager at **SACMI IMOLA**, will discuss the ongoing transition to PVC-free caps and closures for food contact in **"Opportunities of a steady and continuous transition toward PVC-free caps and closures for food contact"**. His presentation traces the development of this transformation and highlights the opportunities, market requirements and technical prerequisites it creates for manufacturers and users.

Secure your ticket for the METPACK Conference now

Tickets for the METPACK Conference are available exclusively via the online shop at www.metpack.de (subject to availability). The ticket includes the lectures and conference documents, catering, and a two-day admission pass for the trade fair.

METPACK INNOVATION AWARDS 2026 – THE GLOBAL INDUSTRY AWARD FOR TECHNICAL EXCELLENCE IN THE METAL PACKAGING INDUSTRY

The METPACK Innovation Awards are among the most prestigious honors in the global metal packaging sector and will be presented during METPACK 2026 in Essen. In the categories of Bronze, Silver, and Gold, they recognize outstanding technical innovations and advancements that significantly drive progress in the production, refinement and sustainability of metal packaging. In doing so, the awards send a strong signal for innovation in a highly specialized industry.

As in previous years, the competition once again attracted numerous submissions from around the world – 26 innovations from 22 exhibitors representing nine countries are competing, underscoring the international character and high relevance of the awards. The industry uses this platform specifically to showcase technological progress and foster exchange on future-oriented solutions.

The entries are evaluated by an international jury of eight distinguished experts using a structured scoring system. Key criteria include efficiency, sustainability, cost reduction and quality improvement. This year, the jury is chaired by Gianluca Ciccolini (Italy).

All exhibitors, partners, and trade visitors are warmly invited to attend the official awards ceremony on Wednesday, May 6, at 1:30 p.m. in Hall 2E57 at the "Talk in a Can" forum area, and to celebrate the industry's innovation highlights together.

Jury at a glance

- Chairman: **Gianluca Ciccolini**, Technical Manager, Gruppo ASA
- **Hein van Jaarsveld**, Global R&D Product and Technology Development Manager Aerosols & Bottles, Trivium Packaging B.V.
- **Yoram Yellin**, Plant Technical Manager, Lageen Food Packaging
- **Axel Schulte**, Vice President Technology, Envases Europe A/S
- **Paul McClure**, President & CEO, Gilpin + Company
- **Hugo Sebastian Trappmann**, CEO, LIMBURGER Packaging Group
- **Andrew Arduca**, Managing Director, Interpack Pty Ltd
- **Alex Fordham**, Owner, The Metal Packager & Managing Director, Connective Press Group Ltd

World's leading trade fair for metal packaging

METPACK CREATES FRESH MOMENTUM WITH "TALK IN A CAN"

NEW FORUM FORMAT BRINGS INDUSTRY EXPERTISE TO THE STAGE

With "Talk in a Can", METPACK (May 5–8, 2026) will celebrate the premiere of a new forum format in Hall 2 at Messe Essen. The stage will bring together expert presentations, product showcases, panels, podcasts and networking. Current topics from the international metal packaging industry will be made tangible and immediately accessible. At the heart of the world's leading trade fair, a new meeting point for exhibitors, visitors, media representatives and partners will be created every day starting at 10 a.m. "Talk in a Can" stands for compact knowledge transfer, international perspectives and direct dialogue on market trends, technologies and best practices across the entire value chain.

The program is aimed at decision-makers, production and quality managers, as well as industry partners from the metal packaging sector. Topics range from market developments and recycling to coating, digitalization and AI, through to energy efficiency, machine performance and new packaging solutions.

Hands-on program highlights on Tuesday

The forum program will kick off on Tuesday, May 5, with the press event "Opening the Can". Following welcoming remarks by Oliver P. Kuhrt, CEO of Messe Essen, the spotlight will turn to current market figures and industry outlooks. Afterwards Tim Clarke, CEO Europe of Enpack Group, will speak about the future challenges facing can makers. A subsequent deep dive will explore market developments and industry trends in greater detail.

Florian Weil, CEO of Weil Technology GmbH, will then provide a strong impetus. In his presentation "Laser-welded stainless steel containers for demanding filling goods: PFAS-free, high-precision and sustainable packaging solutions", he will show how demanding filling goods can be future-proofed with sustainable, PFAS-free, and highly precise packaging solutions. This will be followed by a Henkel

program slot featuring Hajar Eddarir and Chris Cupisz. Brad Stanley, Internal Sales Manager at Unimaq Ltd, will close out the first day with "UniCAM AI Smart Vision", focusing on AI-supported quality assurance in production.

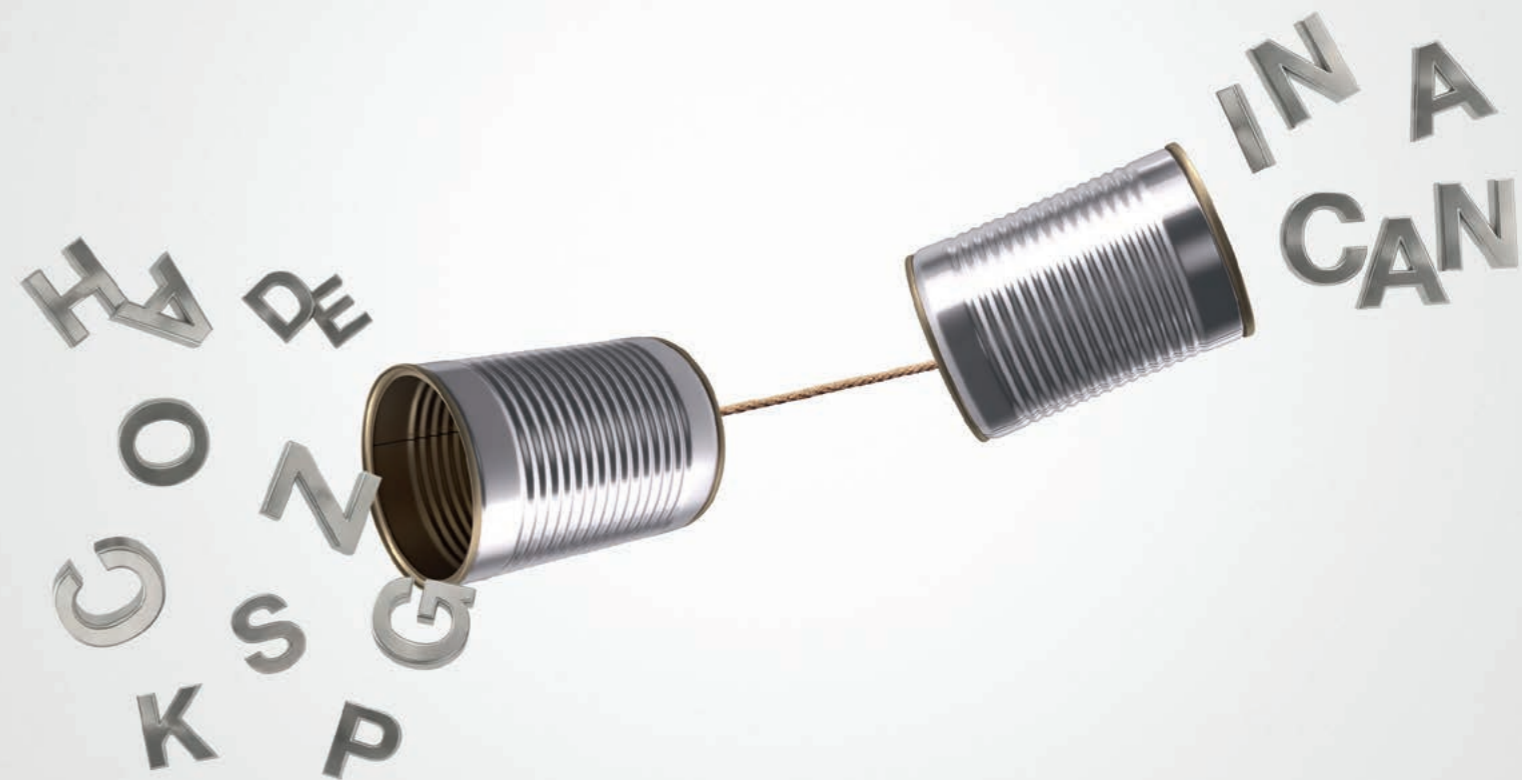

Wednesday: podcast, expert insights and Innovation Awards

On Wednesday, May 6, "Talk in a Can" will begin with the official podcast partner The Metal Pack Pod, published by the trade medium The Metal Packager. NPB and Sun Chemical will then provide additional expert insights before Carsten O. Schultze, General Manager of opti-color Mess- und Regelanlagen GmbH, engages the audience with a topic that is both pointed and highly practical: in "Viscosity test cups – an 'antique' tool in modern production... are you serious?" he will examine the role of classic measurement methods in modern production environments.

A highlight of the second day of the trade fair will be the presentation of the METPACK Innovation Awards. The coveted bronze, silver and gold honors will be awarded on the forum stage. Trade fair guests are warmly invited to experience the ceremony live and learn firsthand which innovations impressed the jury most this year.

To round off the day, the focus will once again shift to key future issues for the industry: Torben Knöß, Head of Technical Affairs at the German Metal Packaging Association (VMV), will address the opportunities and risks of the EU Packaging and Packaging Waste Regulation (PPWR), which comes into force this year. The program continues with the Women in Canmaking Association (WICA). Co-founder Martha Rojas will highlight how targeted support for women can unlock a critical talent pool and sustainably strengthen the industry's competitiveness. Andy Hyde of STOLLE MACHINERY, LLC will conclude the day with his presentation "From Signals to Decisions: Making Can Line Data Actionable", showing how production data can be turned into sound, targeted decisions.

TALK IN A CAN

Thursday features more international voices

Thursday, May 7, will be dedicated to international expertise and technological advancement. The day will open with Rolf Hilfiker, CEO of Pneumofore, and his presentation "The Hidden 50%", focusing on energy efficiency and CO₂ reduction in can lines. Jose Rivera of Mundolatas and Azucena Marin will then trace the development of the easy-open tab in "The Evolution of the Easy-Open Tab: From the Beginning to AnchorEOE". Presentations by Thermo Fisher Scientific and thyssenkrupp Rasselstein will follow.

In the afternoon, the spotlight will shift to digitalization, automation and efficiency gains. Koenig & Bauer will open the second block of the day with "Digital Synergy: Bridging the Gap Between Offset and Agility", before an NPB panel adds further perspectives from the industry. SACMI, in "AI Driven Machine Vision for Quality Control in Metal Packaging: From Concept to Real-world Vision Systems", will show how AI-based machine vision can be used con-

cretely in quality control. Dennis Stammen of STOLLE MACHINERY, LLC will then speak on "Stability at 3000+ EPM – The Real Work", highlighting the requirements for stable high-performance lines. Koenig & Bauer will close the day by revisiting another key issue for the future with "Sustainable Drying: Achieving Maximum Efficiency in Metal Coating".

A stage for knowledge transfer and visibility

With "Talk in a Can", METPACK 2026 is creating a new, high-visibility venue for dialogue, visibility, and in-depth content in Hall 2. The combination of moderated talks, a media lounge, podcasts, product presentations and the METPACK Innovation Awards will make the forum a new content hotspot at the world's leading trade fair for metal packaging.

ACTEGA GMBH

HALL 3, BOOTH 3C55

ACTEGA GmbH The Global Solution Provider for Metal Packaging.

At METPACK, ACTEGA presents solutions that deliver real customer value across the metal packaging industry. The portfolio comprises high performance coatings, printing inks, water-based sealants and compounds designed to improve efficiency, product performance and sustainability across a wide range of applications.

With a global footprint and strong local expertise, ACTEGA combines technical and market know how with a true partnership mindset – from consulting and development to hands-on technical support.

Talk to our experts at booth 3C55 and discover how ACTEGA moves metal packaging forward.

ASC MACHINE TOOLS, INC.

HALL 3, BOOTH 3E30

ASC offers a Material Control Stand for coppers, designed for lubrication systems mounted at the press infeed or for applications with limited floor space. The Material Control Stand features our proprietary auto-adjust infeed, which continuously monitors the decreasing coil diameter and adjusts accordingly. The unit automatically extends, providing true "hands-off" operation with no need for operator monitoring or manual adjustments.

BA.SCO. SRL

HALL 3, BOOTH 3E27

BA.SCO. Srl is specialized in the design and production of leak-testers for metal packaging and it is present in the worldwide market since more than 35 years. BA.SCO. Srl never stopped developing its products and expanding its range of leak-testers to meet the growing needs in all sectors of metal packaging.

Our expertise and the collaboration with the most important manufacturers of metal packaging all over the world has allowed BA.SCO. Srl to achieve technological results of the highest level.

BA.SCO. leak-testers are characterized by the high technological level and the simplicity of use at the same time.

BUNTING MAGNETICS

HALL 2, BOOTH 2B52

Bunting Magnetics delivers precision and reliability for 2-piece can makers with its magnetic printing cylinders. Engineered for stability and print accuracy, these cylinders ensure consistent registration at high speeds, helping reduce waste and minimize downtime while maintaining superior print quality in beverage can production.

Separately, Bunting offers washdown can conveying systems for 3-piece and steel can lines. Designed for hygienic environments and easy cleaning, these conveyors provide durable, reliable performance in demanding washdown conditions.

Across both industries, Bunting supports efficient production while helping manufacturers maintain high standards in can quality and handling.

C.I.E. COMPAGNIA ITALIANA ECOLOGIA SRL

HALL 1, BOOTH 1B51

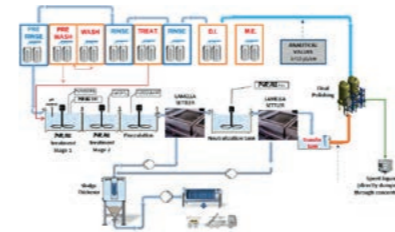

PUR-ALL® PROCESS for TOTAL WATER REUSE coming from Aluminum Cans washers

PUR-ALL® is an innovative wastewater treatment process for Aluminum Can lines, designed for plants facing logistical limits such as no water supply, no

sewer access, or strict discharge regulations.

PUR-ALL® allows the full reuse of water coming from the washers without any sewage discharge.

PUR-ALL® is a Z.L.D. (Zero Liquid Discharge) patented by CIE / MST CHEMICALS with several applications in Aluminum Can field.

CONTITECH ELASTOMER-BESCHICHTUNGEN GMBH

HALL 1, BOOTH 1E44

Erleben Sie auf der Metpack unsere führenden Drucktuchlösungen für Metalldruck-Anwendungen - entwickelt für höchste Prozesssicherheit, brillante Druckqualität und maximale Standzeit. Unsere Marken CONTI-AIR, Phoenix Xtra Blankets, Vulcan, Sava, Rollin, Printec und Conti Laserline verbinden technologische Präzision mit globaler Anwendungskompetenz.

Der Weg von der einfachen Metallverpackung zum hochwertigen Markenprodukt beginnt im Druckprozess – und genau dort entfalten unsere Drucktücher ihre Stärke.

Sie sorgen für eine präzise Farbwiedergabe, Effizienz im Prozess und maximale Reproduzierbarkeit. Damit überzeugt Ihr Produkt am Point of Sale.

DÜRR CTS GMBH

HALL 3, BOOTH 3E34

Electrified air pollution control for metal decorating industry

Printing and coating metal surfaces typically use solvent-based paints that release harmful organic pollutants that must be treated according to legal requirements. Conventional exhaust air purification systems like TNV or RTO rely on fossil-fuelled burners, causing extra CO₂ and NO_x emissions. Dürr CTS's long-established electrically heated RTO offers an alternative: Our Oxi.X RV is optimized for energy-intensive processes in the printing and coating industry and enables sustainable, CO₂-free production. The flameless RTO can clean very small volume flows from 1,000 m³/h, making it ideal for smaller emission sources.

Dürr CTS GmbH
Carl-Benz-Str. 34
74321 Bietigheim-Bissingen (Germany)

FELIX BÖTTCHER GMBH & CO. KG

HALL 3, BOOTH 3D31

Felix Böttcher GmbH & Co. KG is a global partner to the printing industry and offers a broad portfolio of roller coverings, blankets, and chemicals, including solutions for the production of 2-piece and 3-piece metal packaging. The products stand for high productivity, quality, and sustainability. As the world's largest manufacturer of Elastomer-covered rollers, Böttcher draws on more than 300 years of experience and innovation. Working closely with customers, ink and coating manu-

facturers, as well as machine manufacturers, Böttcher develops solutions in its own modern, fully equipped R&D laboratories to meet the demands of today and tomorrow.

GERMANN + FREI AG

HALL 1, BOOTH 1C22

This very compact machine has got 10 heads and is suitable for testing 2-piece can bodies. It detects and ejects cans with pinholes larger than 0.002" as well as split flanges. It is equipped with an Eclipse can body light leak detection system. The VLT 1200 is engineered according to the GERMANN + FREI philosophy. It is designed vertically, very precisely with good access to all parts. This allows to complete a format change in just a few minutes. Thanks to the vertical can alignment, the machine can be integrated compactly into the production line, significantly reducing transport distances. Further, in standalone machines the cans are exposed to less dust than in a combination machines.

GERMANN + FREI AG
Martinsbruggstrasse 92
9016 St. Gallen (Switzerland)

GEW (EC) LIMITED

HALL 2, BOOTH 2D30

LeoLED2 is GEW's next generation, water-cooled UV LED curing system. Offering a 55% increase in electrical power (147W / cm), a 50% increase in UV dose (300mJ / cm²) and a 45% increase in UV irradiance (44W / cm²) compared to its predecessor, LeoLED2 guarantees the best performance on the market for the most challenging curing applications. For metal decorators, LeoLED2 offers energy savings of over 60% compared to conventional UV systems, as well as faster printing and minimal downtime. Instant curing means converters have no issues with colour changes or scratches, resulting in less waste, and faster print speeds improve productivity.

INDUSTRIAS PEÑALVER, S.L.

HALL 3, BOOTH 3C31

Peñalver's Post Repair system for easy open ends (EOE) sets a benchmark in coating application after repair. Designed to ensure precise lacquer coverage on the scored area, it effectively prevents corrosion while maintaining high production speeds. The system stands out for its robustness, process stability and ease of operation, allowing consistent results with minimal maintenance. Its design focuses on long-term reliability and efficiency, supporting can makers in achieving uniform quality across production. Developed in close collaboration with industry leaders, it continues to evolve to meet the demands of modern metal packaging lines.

INTRALOX LLC

HALL 2, BOOTH 2B35

Intralox® introduces the S570 Tight Transfer system for high speed can manufacturing. Designed to eliminate dead plates, the S570 system cuts spoilage, boosts uptime, and ensures gentle handling, even for sleek cans.

Benefits include 70% fewer tipped cans, 50% faster engineering and installation, no stranded cans at label changes, reduced risk of palletizing mixed labels, and no dead plate maintenance. Backed by fast lead times, accurate shipping, and proven reliability, the S570's modular plastic design delivers precise, durable, efficient can handling.

JIANGSU HANMET DIGITAL INTELLIGENT PRINTING EQUIPMENT CO. LTD.

HALL 2, BOOTH 2E39

Nova1200 Single Pass Wide-format High-speed UV Inkjet Production Line

Prints wide-format, industrial-grade, and multi-version metal printing orders. Perfectly integrates with traditional off-set printing production

- Max. Print Speed: 50 m/min
- Max. Print Width: 1200 mm
- Color Config.: W+CMYK+ Lm, Lc/ Digital varnish
- Print Media
- Iron, aluminum, stainless steel, tin-plated steel, etc.

What is UV Digital Inkjet for Metal Sheets?

Combines the advantages of digital inkjet and UV curing to achieve high-speed, high-precision, high-adhesion, and fast-drying printing of patterns or fine text on metallic sheets.

KLINGHAMMER GROUP GMBH

HALL 3, BOOTH 3B32

Klinghammer Group GmbH – New high-speed machine model SFF for asymmetrically shaped cans

Asymmetrically shaped cans offer great potential for branding by combining decoration and shape to a unique package which ensures high product awareness and market presence. The new SFF (Stretch Forming Fast) machine by Klinghammer Group is the specialized high speed shaped can machine with unique features worldwide. The SFF can produce asymmetrically shaped cans at a production speed of 300+ cpm, including a very precise orientation operation before the shaping operation. It offers many more unique functions to ensure reliable, yet flexible production of asymmetrically shaped cans. Visit us in hall 3, booth 3B32.

KOENIG & BAUER METALPRINT GMBH

HALL 3, BOOTH 3B39

New: MetalCoat 484 – High-End Coating & Process Automation

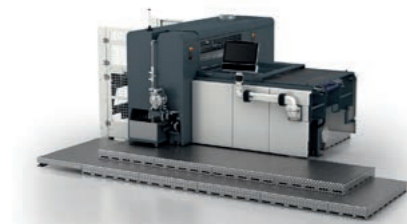

Increased productivity through intelligent technology: The MetalCoat 484 combines Koenig & Bauer MetalPrint's proven 3-roll system with state-of-the-art automation that for real value.

– Saves material: The optional closed-loop coating thickness control continuously monitors and adjusts application automatically – ensuring minimal coating consumption and maximum consistency.

– Saves time: Automatic washing significantly reduces setup times, freeing up operator time.

– Saves effort: Intuitive HMI control with parameter memory for repeat jobs.

The most efficient solution for metal sheet coating – whether inline or as a standalone system.

MEPALINE S.R.L

HALL 3, BOOTH 3E31

Since 2019 Mepaline S.r.l. design and manufacture state of the art welded side seam protection equipment, suitable to any production line speed and layout configuration, meeting the most demanding performance requirements in the metal Packaging Industry.

Located nearby Turin (Italy), Mepaline S.r.l. are committed to supply special systems based on customer specifica-

tions and suitable for implementation on most new or existing production lines for cans, aerosol cans, pails and drums:

- electrostatic powder weld seam protection systems
- liquid lacquer weld seam protection systems (roller, air spray, airless)
- induction, gas, electric and infrared heating curing ovens.

METPACKER AMBALAJ MAKINE SAN. VE TIC. A.S.

HALL 3, BOOTH 3A10

HOLE PUNCHING & HANDLE CLIP SPOT WELDING MACHINE | METSPOTPACKER

Smart solutions for reliable can production

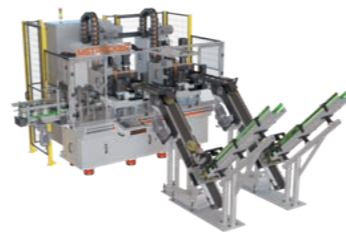

METSPOTPACKER performs high-precision hole punching and handle clip spot welding on the top ends of round and irregular-shaped tin cans.

- Servo-driven punching presses for accurate hole punching
- Servo-controlled welding pressure for consistent quality
- Fully synchronized stations for seamless production
- User-friendly touchscreen interface
- Closed-circuit cooling system for stable operation

Optional configurations:

Multiple presses for punching or edge curling prior to welding · Magnetic stacker · Noise protection enclosure for

vibration feeders · External water cooling unit

METPACKER

Customized can making machinery solutions

CAN BODY ASSEMBLY LINE |
METBODYPACKER

Compact, flexible and efficient production

METBODYPACKER integrates multiple operations into a single compact system for the efficient production of round or irregular can bodies.

- Compact, space-efficient machine design
- Modular system for various can types and shapes
- Fully synchronized stations for seamless, high-speed production
- Tool-free changeovers via HMI recipe-based adjustments

Optional add-on stations:

· Double flanging · Top & bottom seaming · Conical shaping · Necking & flanging · Beading for food cans or pails · Pail top edge double curl · Handle lug welding · UN-certified seam · Lid feeding conveyor system with buffer

NPB AUTOMATION AB

HALL 2, BOOTH 2C39

Introducing innovations for end handling solutions that move you forward.

The new NPB Packaging Center delivers six lanes within the same footprint – enabling higher output, secure future capacity, and no added complexity. NPB also expands its offering within Autonomous Handling Solutions with a fully automated AGV solution for precise and efficient transport of pallets. Together with Canline Systems, we introduce a new patented solution that redefines conveying uptime, as well as SmartEnd – a groundbreaking tool for analyzing conveying systems. Together, we set new standards for efficiency, reliability, and long term performance in automation of manufacturing can ends.

OBERG INDUSTRIES, LLC

HALL 2, BOOTH 2D37

Oberg Industries – Body Maker Punches

With Oberg's bodymaker punches, you'll experience reliable performance, reduced downtime, and seamless integration into your existing systems. Our bodymaker punches are crafted to exact specifications for consistent, high-quality can formation. Built from advanced materials like Tungsten Carbide, Tool Steels, and Ceramics, our

punches are made to last through high-volume production.

Precision and durability are critical for high-speed can production. Oberg Industries delivers top-of-the-line bodymaker punches engineered for efficiency and uncompromising quality that keeps your production running at peak performance.

PNEUMOFORE

HALL 1, BOOTH 1C32

Pneumofore manufactures industrial vacuum pumps as well as high- and low-pressure compressors and is a leading supplier of large-capacity centralized systems for the metal packaging industry. Founded in 1923, it pioneered Rotary Vane technology and continues to develop high-efficiency pneumatic solutions. Thousands of units operate worldwide, offering continuous operation, maximum durability and up to 10-year warranty on efficiency. Designed for the lowest Life Cycle Cost, Pneumofore machines are fully customizable even for extreme, from high altitude to hot climate environments. Advanced controls, remote monitoring and optimized system design ensure maximum efficiency. Pneumofore has the expertise to supply the most durable and energy-efficient compressors and vacuum pumps with the lowest Life Cycle Cost on the market.

SACMI IMOLA SC

HALL 1, BOOTH 1C28

PMA is SACMI's exclusive solution for safe and sustainable packaging.

The PMA24LE produces PVC free annular liners for Twist Off and PT caps, meeting both today's market requirements and future EU regulations.

The technology eliminates the curing oven, reduces energy consumption, floor space, and risks of liner contamination.

It delivers high performance (up to 1,000 caps/min), minimizes the weight of the annular seal, and is also ideal for baby food and dairy products.

At Metpack 2026, you will see the PMA24LE in action, equipped with SACMI CVS vision systems, processing a 66 mm format.

SOUDRONIC AG

HALL 3, BOOTH 3A19

COMPACT Top and Bottom Seam Welder

Looking for a flexible canbody welder offering cutting-edge technology, advanced safety, and outstanding value? The new COMPACT series from Soudronic delivers exactly that. The COMPACT is the first welding machine in the market that uniquely integrates two canbody welding concepts in one machine design. Small cans are welded in the traditional concept with seam on top while large and heavy containers are welded on the bottom.

- Speed range: 40–240 cans per minute
 - Equipped with DISCON D Lock roller head and FLUID+ cooling
 - 5 minute height changes and under 20 minute complete format changes
 - Available with SMARTControl or UNICONTROL 4
 - Fully enclosed design for maximum safety
 - Swiss-engineered reliability at a surprisingly competitive price
- Visit Soudronic in Hall 3, Booth 3A19 – soudronic.com

STOLLE MACHINERY COMPANY

HALL 3, BOOTH 3C47

Stolle Machinery is featuring several new innovations at Metpack, including a MR (Mixed Reality) demonstration of a life size virtual E-HSL high speed compound end liner. There will also be 3D printed models and information on other recent innovations, as well as a live demonstration of our AI enhanced inSight system for real time facility and line monitoring. Stolle's Global Systems division will discuss the design and installation of production facilities world-wide, and Toyo Seikan will feature two of their latest innovations – ADIC and CBR. Stolle invites all Metpack 2026 attendees to stop by our stand 3C47 to learn what's new from the world leader in can and end production solutions.

UBIS (ASIA) PUBLIC COMPANY LIMITED

HALL 3, BOOTH 3E37

"Precision Solutions for the Global Metal Packaging Industry

UBIS (Asia) Public Company Limited, headquartered in Bangkok, Thailand, is a trusted manufacturer of high-performance sealing compounds and can coatings for the global metal packaging industry. With more than 43 years of expertise and an annual production capacity of 17,000 tons, we deliver flexible, made-to-order chemical solutions for 2-piece and 3-piece cans, drums, and aerosol packaging. Our products are exported to more than 25 countries worldwide, serving customers across Asia, the Middle East, Europe, and the Americas.

We provide BPA-NI and PFAS-free interior and exterior coatings, together with advanced Polyester and PVC Organosol systems engineered to deliver excellent adhesion, flexibility, sterilization resistance, and premium printability. Our sealing compounds ensure secure seals for metal packaging, helping manufacturers maintain product integrity, prevent leakage, and extend shelf life in demanding production environments. Supported by continuous research and development, we work closely with customers to develop customized chemical solutions that optimize production efficiency and ensure reliable packaging performance. By combining technical expertise and innovation, UBIS supports the evolving needs of the global metal packaging industry. UBIS — Where Technical Flexibility Meets Long-Term Partnership.

UniCAM – AI Smart Vision for Lacquer Rim Inspection

Unimaq presents our UniCAM quality control system, built to inspect bottom-rim lacquer coverage during live production. The intelligent vision system is built for non-stop, high-precision quality control. UniCAM detects defects in real time to ensure flawless production 24/7.

Advanced real time warning: Provides alerts as coating levels deteriorate, giving the operator the time to implement corrective measures without stopping production.

Data Recording: AI quality control system that records production data. Flexible integration: Can be used as a standalone system in an existing production line or as an optional extra on a new rim coating machine.

ZELLER + GMELIN GMBH & CO. KG

HALL 3, BOOTH 3B49

The printing ink specialist Zeller+Gmelin is strategically expanding its portfolio with a new generation of LED-curing printing inks and coatings, responding to the growing demand for energy-efficient solutions in packaging printing on steel, tinplate, and aluminum. The systems are precisely matched to the wavelengths of modern LED-UV curing units, significantly reducing energy consumption and eliminating ozone-generating radiation. They are particularly effective on temperature-sensitive substrates, offering minimal heat generation and reliable curing even at high speeds. With this move, Zeller+Gmelin strengthens its position as a driver of innovation in sustainable printing processes.

UV or UV LED for metal decorating

- Reduced energy costs compared to alternative drying methods
- Durable finish minimises waste
- Cooler operating environment
- UV LED produces no VOCs
- Lowest carbon footprint
- Scratch-resistant finish
- High gloss print

Ian Victor
Managing Director
Coleus Packaging (Pty) Ltd.

"To anybody that's going to convert to LED, you'll realise the benefits quickly.

It is the way to go, it is the future, and the quicker you do it, the better."

Watch our case study video

gewuv.com/coleus

ArcLED interchangeable UV technology enables UV Arc & LED lamps to be used side by side on your press, for ultimate flexibility.

MESSE
ESSEN

The numbers preceding the product category denote the serial index numbers 1.1 – 16.1 of the list of exhibits with exhibitors (see page 86).

1	Machines and equipment for the manufacturing of cans and can ends
1.1	Can types
1.1.1	Aerosol three-piece cans
1.1.2	Beverage cans
1.1.3	Food cans
1.1.4	Canisters
1.1.5	Technical cans
1.1.6	General line cans
1.1.7	Sanitary cans
1.1.8	Three-piece cans (others)
1.1.9	Two-piece cans (others)
1.1.10	Composite cans
1.1.11	Others
1.2	Machines and equipment
1.2.1	Slitters
1.2.2	Blank feeders
1.2.3	Welders
1.2.4	Welded seam protection and curing systems
1.2.5	Body forming/shaping machines
1.2.6	Combined can making machines
1.2.7	Multi station can making machines
1.2.8	Body parters
1.2.9	Neckers
1.2.10	Flangers
1.2.11	Beaders
1.2.12	Scroll shears
1.2.13	Deep-drawing press with strip/feeding
1.2.14	Deep-drawing press with sheet feeding
1.2.15	Deep-drawing press with coil feeding
1.2.16	Trimmers
1.2.17	Rollformers
1.2.18	Calibrating equipment
1.2.19	Tools and dies
1.2.20	Cupping presses
1.2.21	Ironing bodymaker (DWI)
1.2.22	Composite can making machines
1.2.23	Coil-cutting lines
1.2.24	Expander machines
1.2.25	Seamers
1.2.26	Testing machines
1.2.27	360° inside protection for 3-piece cans
1.3	Top and bottom ends
1.3.1	Aerosol cones and domes
1.3.2	Beverage ends
1.3.3	Easy open
1.3.4	Ends for general line cans
1.3.5	Ends for sanitary cans
1.3.6	Ends for food cans
1.3.7	Ends with aluminium membrane
1.3.8	Others
1.4	Machines and equipment
1.4.1	Scroll shears
1.4.2	Slitters
1.4.3	Presses with strip feeding
1.4.4	Presses with sheet feeding
1.4.5	Presses with coil feeding

1.4.6	Curlers
1.4.7	Compound liners
1.4.8	Ovens and curing equipment
1.4.9	Assembling machines
1.4.10	Sealing equipment
1.4.11	Testing equipment
1.4.12	Tool and dies
1.5	Can and can end handling equipment and palletiser
1.5.1	Air conveyors
1.5.2	Magnetic conveyors
1.5.3	Vacuum conveyors
1.5.4	Counters
1.5.5	Feeders
1.5.6	Palletiser
1.5.7	Depalletiser
1.5.8	Stackers
1.5.9	Transport systems/chain
1.5.10	Transport systems/belt
1.5.11	Transport systems/rope
2	Machines and equipment for the manufacturing of caps
2.1	Cap types
2.1.1	Crown cork caps
2.1.2	Medical caps
2.1.3	Pilferproof caps
2.1.4	Screw caps
2.1.5	Twist-off caps
2.1.6	Others
2.2	Machines and equipment
2.2.1	Scroll shears
2.2.2	Slitters
2.2.3	Deep-drawing-presses
2.2.4	Rollformers
2.2.5	Embossing and polishing equipment
2.2.6	Threadrollers
2.2.7	Lug formers
2.2.8	Compound liners
2.2.9	Wad insertors
2.2.10	Combined cap making machinery
2.2.11	Multi-station cap making machinery
2.2.12	Ovens and curing equipment
2.2.13	Feeders
2.2.14	Conveyors
2.2.15	Counters
2.2.16	Seamers
2.2.17	Testing equipment
2.2.18	Tools and dies
3	Machines and equipment for the manufacturing of tubes and containers (aluminium)
3.1	Tube and container types
3.1.1	Aerosol cans
3.1.2	Toothpaste tubes
3.1.3	Medical containers
3.1.4	Pesticide containers
3.1.5	Silicone containers
3.1.6	Ink containers

3.1.7	Others
3.2	Machines and equipment
3.2.1	Extrusion presses
3.2.2	Tube lathes
3.2.3	Trimmers
3.2.4	Annealing equipment
3.2.5	Internal lacquering equipment
3.2.6	Internal drying equipment
3.2.7	Base coating machines
3.2.8	Drying ovens
3.2.9	Printing equipment
3.2.10	Neckers
3.2.11	Flow forming equipment
3.2.12	Threadrollers
3.2.13	Beaders
3.2.14	Flangers
3.2.15	Seamers
3.2.16	Lining equipment
3.2.17	Capping machines
3.2.18	Feeders
3.2.19	Test equipment
3.2.20	Tools and dies
3.2.21	Drum types
4	Machines and equipment for the manufacturing of drums and drum closures
4.1	Drums and types of drum closures
4.1.1	Standard
4.1.2	Safety
4.1.3	Others
4.2	Machines and equipment
4.2.1	Formers
4.2.2	Welders
4.2.3	Flangers
4.2.4	Beaders
4.2.5	Trimmers
4.2.6	Seamers
4.2.7	Slitters
4.2.8	Presses
4.2.9	Threadrollers
4.2.10	Test equipment
4.2.11	Tools and dies
5	Surface treatment equipment
5.1	Washers
5.1.1	Surface pretreaters
5.1.2	Dryers
5.1.3	Sprayers
5.1.4	Sheet lubricators
5.1.5	Coil lubricators
6	Coating and printing equipment incl. curing
6.1	Product categories
6.1.1	for cans
6.1.2	for caps
6.1.3	for coils

6.1.4	for containers
6.1.5	for sheets
6.1.6	for others
6.2	Machines and equipment
6.2.1	Feeders
6.2.2	Coaters and printers for containers
6.2.3	Screen printing machines
6.2.4	Coaters and printers, coil
6.2.5	Coaters and printers, sheet
6.2.6	Spraying equipment
6.2.7	Ovens
6.2.8	UV-ovens
6.2.9	IR-ovens
6.2.10	Stackers
6.2.11	Unloaders
6.2.12	Spot coating equipment
6.2.13	Testing equipment
6.2.14	Tools
6.2.15	Heat recovery plants
6.2.16	Repair Coat Spray system for E.O.E.
7	Can filling and closing equipment
7.1	Types of equipment and machinery
7.1.1	Cappers
7.2.1	Carbonators
7.3.1	Coders
7.4.1	Conveyors
7.5.1	De-aerators
7.6.1	Fillers
7.7.1	Labeling equipment
7.8.1	Orientating equipment
7.9.1	Pasteurizers
7.10.1	Retorts
7.11.1	Rinsers
7.12.1	Seamers
7.13.1	Vacuum-seamers
7.14.1	Sterilisers
7.15.1	Washers
7.16.1	Test-cappers
7.17.1	Tooling
7.18.1	Sealing machines
8	Auxiliary equipment for can and cap lines
8.1	Types of equipment and gauges
8.1.1	Coding equipment
8.1.2	Gauging systems
8.1.3	Inspection equipment
8.1.4	Line control equipment
8.1.5	Laboratory equipment
8.1.6	Test equipment
8.1.7	Torque meters
8.1.8	Blank handling systems
8.1.9	Strip handling systems
8.1.10	Sheet handling systems
8.1.11	Coil handling systems
8.1.12	Chillers
8.1.13	Double sheet detectors

8.1.14	Thickness measuring instruments
8.1.15	Welded seam detectors
8.1.16	Weighing and counting equipment
8.1.17	Uncoilers
8.1.18	Rolling equipment
8.1.19	Embossing machinery
8.1.20	Feeders
8.1.21	Respooling systems for (multiple use of copper weld wires)

9 Pollution control-, cleaning- and recycling noise-reduction equipment

9.1 Machines and equipment

9.1.1	Air pollution control equipment
9.1.2	Dust removing equipment
9.1.3	Effluent treatment equipment
9.1.4	Recycling systems
9.1.5	Scrap baling presses
9.1.6	Air-conditioning systems
9.1.7	Noise-reduction equipment
9.1.8	Solvent recovery plants

10 Secondary packaging equipment

10.1 Types of equipment

10.1.1	Banding equipment
10.1.2	Case palletisers
10.1.3	Case packers
10.1.4	Checkweighers
10.1.5	Endwrappers
10.1.6	Multipacking equipment
10.1.7	Shrink sleeving equipment
10.1.8	Shrink wrapping equipment
10.1.9	Stretch wrapping equipment

Precision Color. Proven on Press.

Trusted by Metal Decorators.

Delivering consistent color, proven performance, and regulatory confidence on every run

On today's shelf, color drives recognition. On the production floor, control and consistency determine success. INX metal decorating systems deliver both.

From high-speed beverage cans to complex three-piece containers, INX provides press-stable color, dependable adhesion, and predictable cure response that supports steady operations and consistent quality. Our formulations align with evolving regulatory expectations while maintaining the reliability decorators trust every day.

Trusted by metal decorators worldwide, INX delivers reliable systems designed to protect production efficiency and maintain brand consistency.

Meet us at METPACK. Stand 3C15.
